LEGAL EASE

AI-Powered Legal Document Generator

Phase 1: Brainstorming & Ideation

1. Introduction

Legal documents are commonly required by individuals, freelancers, startups, landlords and businesses for activities such as employment, confidentiality, rental agreements and service arrangements.

Creating such documents manually can be time-consuming, especially for users who are unfamiliar with legal terminology, document structure and professional formatting.

To address this problem, our team proposed **LegalEase**, an AI-powered legal document generation platform that assists users in creating structured and editable legal document drafts from simple user-provided information.

LegalEase uses Generative AI to generate document content based on inputs such as document type, parties involved, terms and conditions, and effective date.

2. Problem Identification

During the brainstorming process, our team identified the following challenges:

1. Creating legal documents manually can be time-consuming.
2. Users may find legal terminology difficult to understand.
3. Preparing properly structured documents requires formatting knowledge.
4. Creating different types of agreements repeatedly can be inconvenient.
5. Users may need editable versions of generated documents.
6. Exporting documents into professional formats can require additional effort.

These observations led the team to explore an AI-assisted solution for simplifying the initial drafting process.

3. Brainstorming Ideas

The team considered several possible approaches for solving document-related problems.

Idea 1: Manual Legal Document Templates

Create predefined templates for commonly used documents.

Advantages:

- Simple implementation
- Easy to understand

Limitations:

- Limited customization
- Users still need to manually modify clauses
- Difficult to support many document variations

Idea 2: Online Document Generator

Develop a web application where users provide information and receive a structured document.

Advantages:

- User-friendly
- Faster document preparation
- Easy to provide multiple document formats

Limitations:

- Requires predefined logic and templates
- More effort required to handle variations in user requirements

Idea 3: AI-Powered Legal Document Generator

Use Generative AI to create customized document drafts based on user inputs.

Advantages:

- Dynamic content generation
- Supports different document requirements
- Can provide structured and customizable output
- Can be combined with editable previews and document export

Selected Idea:

LegalEase – AI-Powered Legal Document Generator

The project document identifies Generative AI as the core technology for creating personalized legal documents.

4. Proposed Solution

The proposed solution is **LegalEase**, a web-based AI-assisted legal document generation platform.

The system allows users to provide:

- Document type
- Parties involved
- Terms and conditions
- Effective date

The application processes these inputs through the backend and AI generation system. The generated document is then displayed to the user for preview and editing.

The final document can be exported in:

- TXT format
- DOCX format
- PDF format

The project specification describes these input, generation, editing and export capabilities.

5. Target Users

LegalEase is designed to assist different categories of users.

Target User	Possible Requirement
Startup Founders	Employment contracts
Freelancers	Non-Disclosure Agreements
Landlords	Lease agreements
Small Businesses	Business agreements
Individuals	Basic document drafts

The project document provides examples involving startup founders, freelancers and landlords.

6. Key Features Identified

During brainstorming, the following features were identified for LegalEase:

6.1 AI-Powered Document Generation

The system generates structured legal document content based on user-provided information.

6.2 Multiple Document Types

The system can support document types such as:

- Contracts
- Agreements
- NDA
- Lease Agreement
- Employment documents

6.3 Editable Preview

Users can review and modify generated content before downloading the document.

6.4 Multiple Download Formats

Users can download generated documents as:

- TXT
- DOCX
- PDF

6.5 Professional Formatting

Generated documents can contain:

- Titles
- Headings
- Terms tables
- Logos
- Headers

- Footers

6.6 User-Friendly Interface

The application will provide a simple interface so that users without technical knowledge can provide their information and generate documents.

These features are based on the project specification supplied for LegalEase.

7. Initial System Concept

The initial system concept identified during brainstorming is:

User

↓

Streamlit Frontend

↓

FastAPI Backend

↓

Gemini AI

↓

Generated Legal Document

↓

Editable Preview

↓

TXT / DOCX / PDF

The supplied project document defines Streamlit as the frontend, FastAPI as the backend and Gemini as the AI integration.

8. Expected Benefits

The proposed LegalEase system is expected to:

1. Simplify the initial drafting of common legal documents.
2. Reduce the time required to prepare structured document drafts.
3. Provide an easy-to-use interface.

4. Allow users to customize generated content.
 5. Provide multiple document export formats.
 6. Improve consistency in document formatting.
 7. Make basic document drafting more accessible to non-technical users.
-

9. Future Possibilities Identified During Brainstorming

The team identified several possible future enhancements:

- Support for additional legal document types
- Multilingual document generation
- Advanced document analysis
- Clause highlighting
- Integration with legal information sources
- Improved document customization
- Additional document templates

These possibilities are consistent with the future-enhancement directions described in the supplied project document.

10. Conclusion

After evaluating different approaches, the team selected **LegalEase – AI-Powered Legal Document Generator** as the proposed project.

The idea combines Generative AI, a user-friendly frontend and a backend API to provide a streamlined workflow for generating, editing and exporting structured legal document drafts.

The brainstorming phase established the project's problem statement, target users, proposed solution, key features and initial system concept. These outcomes will be used as the foundation for the subsequent requirement analysis and system design phases.
